PRODUCT DEMO

Job Apply Agent

Your daily job search on autopilot: Naukri, LinkedIn and Monster in one place.

Job hunting is repetitive

Same portals, every day
Search Naukri, LinkedIn and Monster again and again

Long descriptions
Read each one to judge whether you really fit

The same forms
Retype your details on every company career site

Same steps.
Every day.
Every portal.

One agent, four steps

1. Upload

Add your resume once. Skills, roles and experience are detected.

2. Search

Every day the agent searches your portals for matching roles.

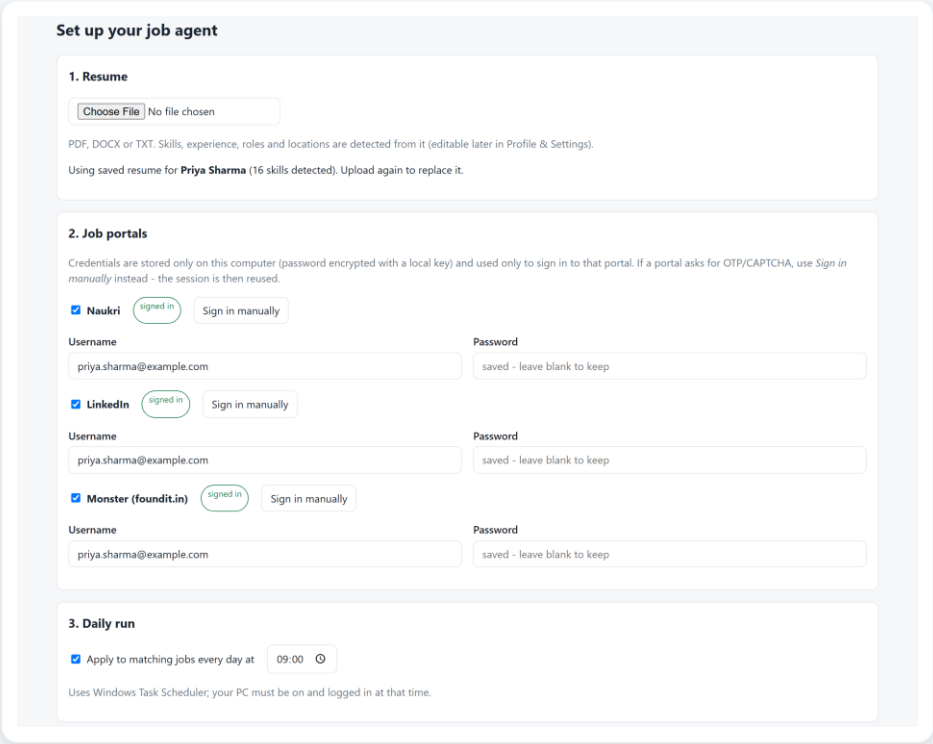

3. Apply

Each job gets a match %. Good matches are applied to.

4. Track

See every job, its status and its description on the dashboard.

Set up in minutes

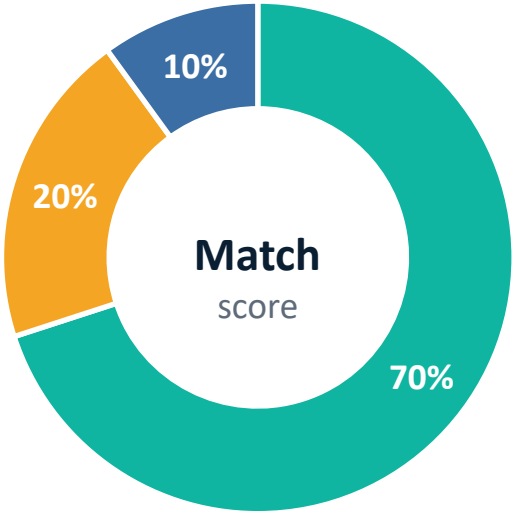

Upload your resume
PDF, DOCX or TXT. Profile fills itself in.

Add portal logins
Stored only on your PC, password encrypted.

Pick a daily time
The agent runs by itself at that time.

Every job gets a match score

70% Skills coverage
Share of the job's skills that you have

20% Job title
How closely it matches your target roles

10% Experience fit
Penalty if the job needs far more years

The agent only applies above your minimum match % (you set it).

Applies where it can

And clearly flags everything else for you.

Portal apply

Naukri Apply, LinkedIn Easy Apply and Monster Apply are clicked for you.

Company website

The agent opens the employer's form, fills your saved details, attaches your resume and submits.

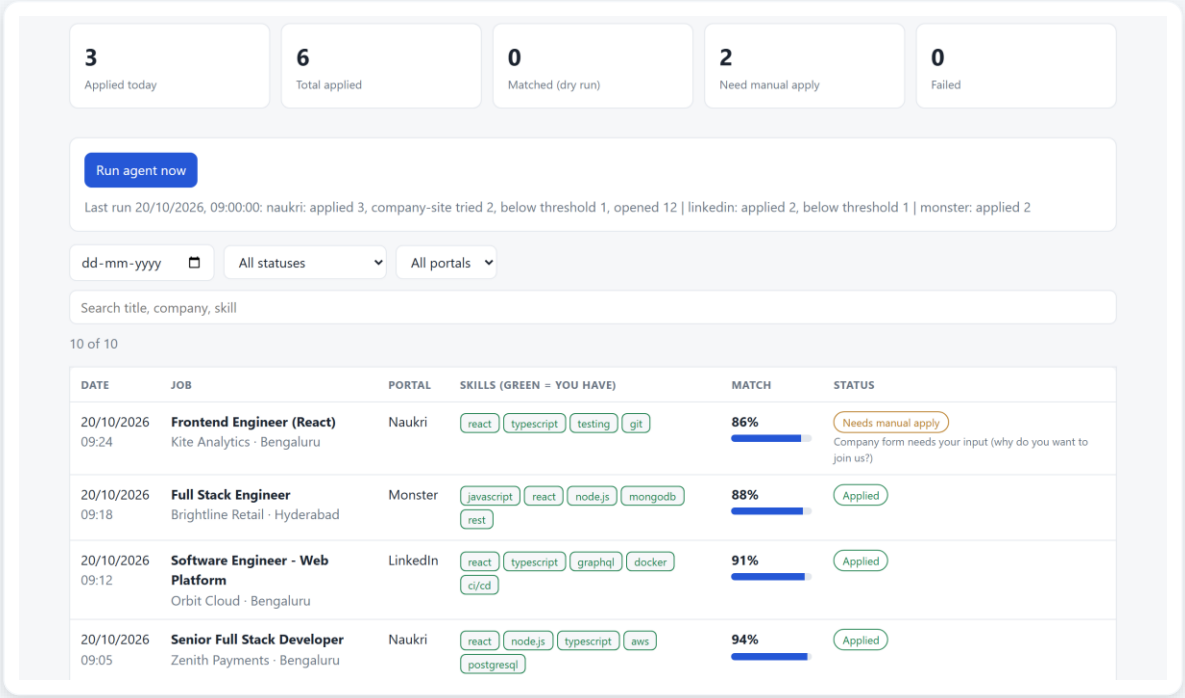

Needs you

Extra questions, sign-in walls or CAPTCHA: it stops and tells you why. It never guesses.

Every job ends with one clear status:

Applied | **Needs manual apply** | **Skipped (low match)**

Track every application

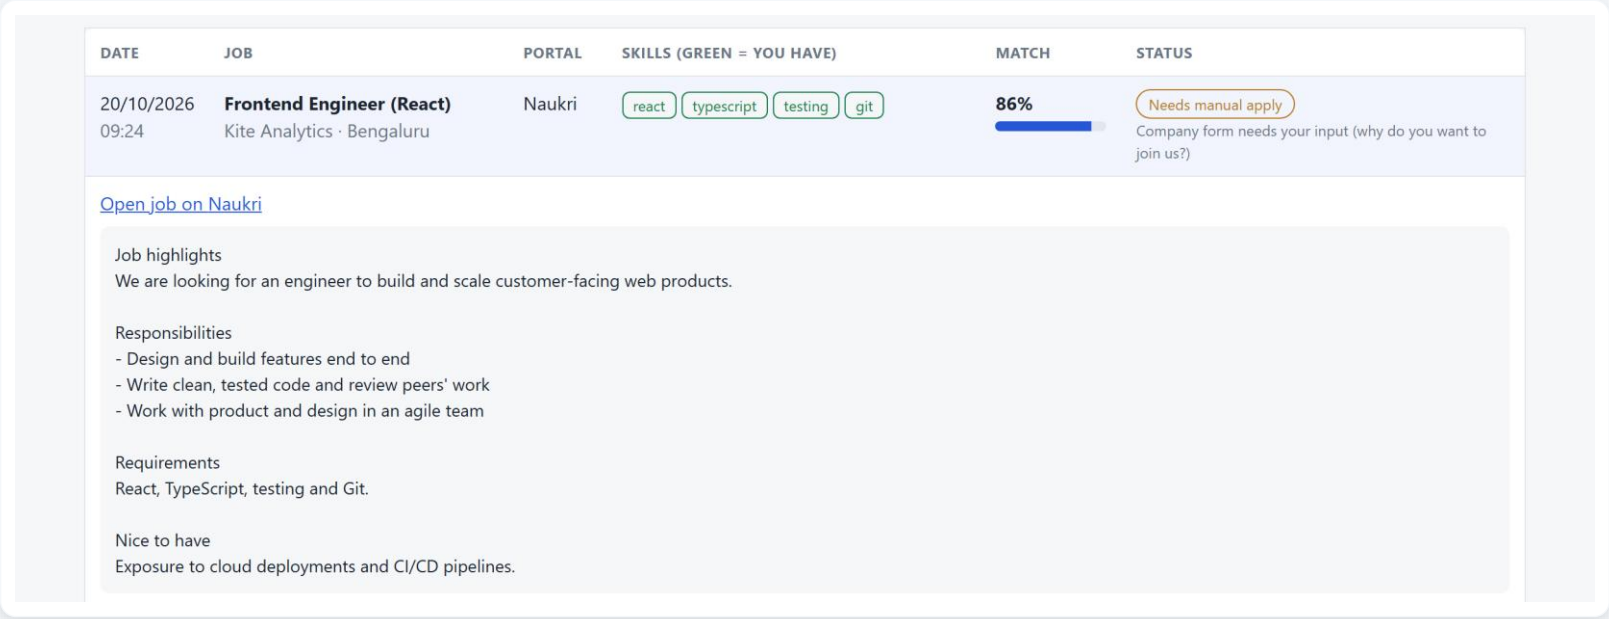

Date and status
When and how it ended

Job and skills
Green = a skill you have

Match %
Why it was (not) applied to

Filters
Date, status, portal, search

Full job details, saved

DATE	JOB	PORTAL	SKILLS (GREEN = YOU HAVE)	MATCH	STATUS
20/10/2026 09:24	**Frontend Engineer (React)** Kite Analytics · Bengaluru	Naukri	react · typescript · testing · git	86%	Needs manual apply Company form needs your input (why do you want to join us?)

Open job on Naukri

Job highlights
We are looking for an engineer to build and scale customer-facing web products.

Responsibilities
- Design and build features end to end
- Write clean, tested code and review peers' work
- Work with product and design in an agile team

Requirements
React, TypeScript, testing and Git.

Nice to have
Exposure to cloud deployments and CI/CD pipelines.

You stay in control

Dry run first

Preview matches before anything is submitted.

Your limits

Minimum match % and a cap per portal per run.

Data stays local

Resume, logins and history live on your PC.

Stops when unsure

A required question it can't answer is left to you.

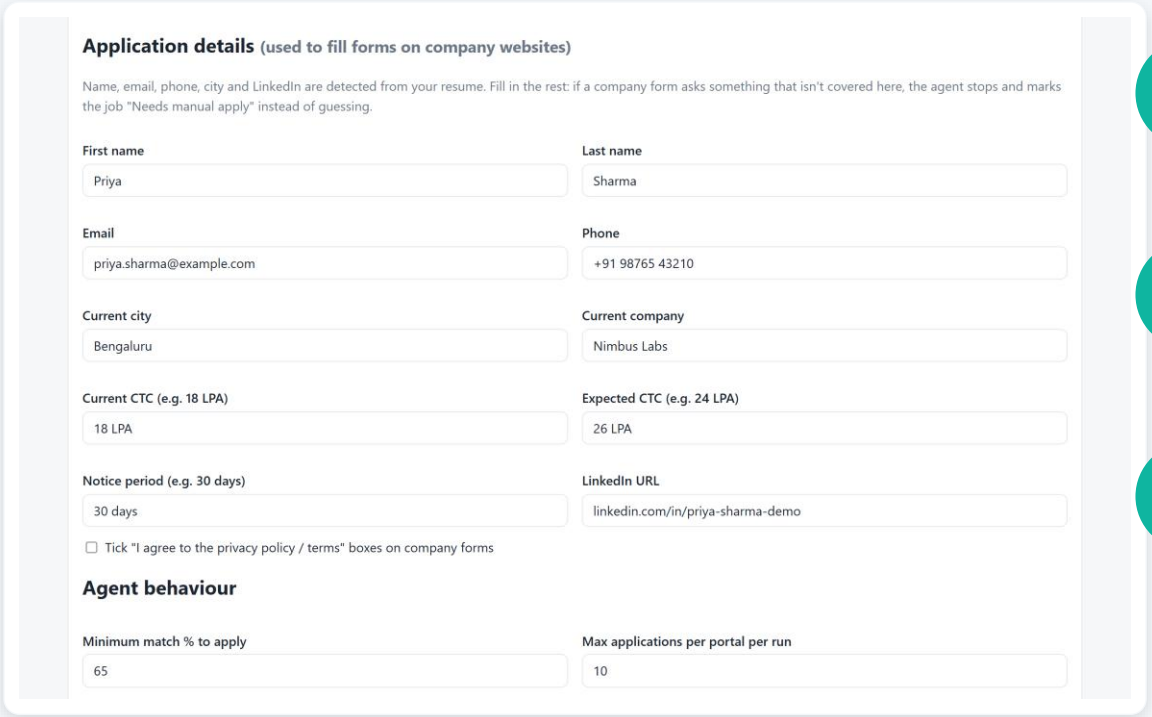

No workarounds

It never solves CAPTCHAs or creates accounts.

Consent is opt-in

Privacy boxes are ticked only if you allow it.

Tune it to your profile

Application details
Used to fill company forms.

Minimum match %
Raise it for fewer, better fits.

Daily cap
Maximum applications per portal.

Good to know

Portal terms
Automated applying may breach a portal's terms. Use modest limits.

Sites change
Portal pages change; the agent's page selectors need occasional updates.

Some steps stay manual
OTP, CAPTCHA and account-only career sites are finished by you.

PC must be on
Daily runs happen on your Windows PC at the time you choose.

Start with a dry run

1. **Upload resume**
2. **Connect portals**
3. **Review the dry run**
4. **Switch to live**
